[@DianaBowser8](#)

Globally recognized health economist, health care leader, and health services researcher with a unique combination of skills in higher level academic management, research and proposal development, and teaching. Widely recognized for research on understanding trends in health system change, especially related to the financing and cost impacts on efficiency and effectiveness of health care programs, with a specific focus on vulnerable populations. Has worked at both the global and federal level on a number of research projects focusing on specific populations such as women and children and migrants and topics related to behavioral health and substance abuse.

Currently Professor and Associate Dean for Research and Integrated Science at the William F. Connell School of Nursing within Boston College. Previously, Director of the PhD Program in Social Policy and Master's Program in Global Health Policy and Management at Brandeis University. Teaches graduate level courses in health economics, financing, health systems, research methods, and evaluation at several universities in the Boston area.

Leads a large research portfolio of close to \$1 million annually. As part of this portfolio, is the Principal Investigator for two NIDA funded projects that are part of the Helping to End Addiction Long-term Initiative (HEAL) examining the prevention and treatment options for individuals with substance use disorders. Currently leading an evaluation of health care services offered to Venezuelan migrant populations in Colombia funded by the UK government. Has led a number of other research studies examining the impact on health outcomes from various health system interventions including new technology, new infrastructure, and changes in the health work force both globally and in the United States.

Also, Course Director for six Global Executive Training Programs at the Harvard T.H. Chan School of Public Health. Expert in bringing together top health care leaders from around the globe, in an innovative learning environment, to develop health system solutions for countries around the world. Training programs focus on understanding and finding solutions to health system problems related to
